Kyocera Slider Sonic Cellphone

Most prepaid cellphones don't leave much to the imagination by providing the minimal amount of basic services for this type of device. You normally don't receive the benefits of the products that are offered with a service plan. The Kyocera Slider Sonic cellphone changes all that by offering a camera and MP3 player which are normally not included with a prepaid unit and it receives our Editor's Choice Award for features and value.

The Kyocera Slider Sonic cellphone VGA camera and flash provides enough quality that you can use the image on a web site as well as assigning the picture to a caller ID number. When we printed the image to a photo printer, we found the 4x6-inch picture was somewhat pixelated. The cellphone also includes a program that can play MP3 and unprotected WMA music on the device. The prepaid service used with this cellphone is made available through the Virgin Mobile cellular network.

One of the key features of this product that you won't find with other prepaid cellphones is the device's TransFlash removable memory slot. When the company ships the cellphone it already has a 32MB card already placed in the slot. You also have the ability to use any number of TransFlash memory cards which have a maximum size of 512MB at this time

that can be used to store music, images and video on the device.

The cellphone has a vibrant 1.9-inch LCD display which has a resolution of 176x220. Although it is about the same size as a flip phone the way it works is quite different. The display was a little washed out in direct sunlight however this is not abnormal for this type of product. The numeric keypad is hidden when not in use and then slides down from the back of the display when you want to dial a number, take a picture or listen to music. Buttons on the device are used to play the music and they include functionality to play, rewind, stop and fast forward the music selections house on the device.

A USB cable is provided in the package and is used to transfer data between TransFlash card and your computer system. The cable also provides the ability to recharge the cellphone's battery. When we tested the cellphone it provided us with around four hours of constant use before the recharge was necessary.

If you want a highly functional cellphone that provides quite a few extra features that your average prepaid cellphone, then check out the Kyocera Slider Sonic. The cellphone is listed for \$250 on the company's web site however we found better pricing on the internet with a price of \$169. More information and technical specifications on this cellphone can be found at www.kyocera-wireless.com

our take
